RE: Heritage Drive SE 138 – 9.83L Transmission Line Replacement Project

Dear Landowner/Resident/Occupant/Business Owner:

As part of our ongoing consultation process for the Heritage Drive SE 138 – 9.83L Transmission Line Replacement Project (the Project), we are writing to provide an update and outline next steps.

The Project involves replacing the 683 meter underground portion of the existing 9.83L transmission line, which is nearing the end of its service life. The existing underground portion of the transmission line will be removed and replaced with an overhead transmission line. The proposed new portion, including an alternate route variant, would extend from the existing No. 43 Substation and reconnect to the existing overhead portion of the 9.83L transmission line on the south side of Heritage Drive SE near Fairview Drive SE.

Technical design for the Project has continued to advance. The enclosed map reflects the current stage of design development, including the following:

- Based on the work completed to date, ENMAX Power Corporation (ENMAX Power) has identified the purple route along the north side of Heritage Drive SE as the preferred transmission line route (the "Preferred Route"). The alternate route would follow the Preferred Route before using the blue route variant to cross to the south side of Heritage Drive SE at the east end of the Project area. Both routes are technically viable and comparable; however, ENMAX Power considers the Preferred Route to be the best option based on traffic accommodation, constructability, and overall project cost. ENMAX Power intends to include both routes in the facility application it files with the Alberta Utilities Commission (AUC), and the AUC may approve either route.

- Through further technical design, ENMAX Power has determined:
  - Structure heights along the Preferred Route will be approximately between 20 and 25 m.
  - Work will be required both inside and outside the ENMAX No. 43 Substation fenceline. This will include a short-term construction stage (anticipated to be less than 3 months) outside the fenceline, involving the temporary installation of a pole in the workspace adjacent to the ENMAX No. 43 Substation, as shown on the enclosed map. This pole is necessary to ensure the substation maintains the appropriate level of reliability while a new transmission end structure is installed inside the substation and will be removed at the end of construction. The Project will include the temporary installation of a pole near structure 34 within the existing alignment to support construction. This temporary pole will be removed at the end of the construction.

Planned transmission line outages associated with Project construction are not expected to affect electrical service for customers in the area.

Subject to final design, trees adjacent to ENMAX Substation No. 43 within the temporary workspace may need to be trimmed or removed to accommodate construction activities. Before trimming or removing trees, ENMAX Power will obtain approval from the appropriate City of Calgary departments. Areas affected by construction activities will be restored as required, in consultation with The City.

Ongoing Engagement

ENMAX Power currently plans to file the facility application in December 2026, and we would appreciate any additional feedback you might have by December 8, 2026. We remain committed to engaging with the community and encourage you to reach out about the Project at any time, including after the facility application is filed or during Project construction or operations.

For more information about the AUC's regulatory review process, including how to participate, please contact the AUC directly.

Enclosure: Update Letter Map

In the spirit of reconciliation, we respectfully acknowledge that we live and work on the traditional lands of Indigenous Peoples. ENMAX headquarters is in Calgary, Alberta, the traditional territory of the Blackfoot Confederacy, comprised of the Siksika, Kainai, Piikani, and Amskapi Piikuni Nations; the Tsuut'ina Nation; and the îyârhe Nakoda Nations of Chiniki, Bearspaw, and Goodstoney, and home to the Métis Nation of Alberta, as well as many diverse Indigenous people who have made the city their home. We are committed to strengthening relationships with Indigenous Nations and peoples in all communities where we operate, through respect and collaboration.
