

Environment

At ENMAX, we strive to reduce effects to air, water, land and wildlife during construction and maintenance activities. We do this by:

- Completing annual environmental training for all employees and contractors working on ENMAX projects.
- Identifying potential effects to the environment during the planning phase of every project.
- Working with regulatory agencies including the City of Calgary, Alberta Environment and Protected Areas, Fisheries and Oceans Canada, and Environment and Climate Change Canada to ensure all required approvals and permits are obtained before starting any project.
- Complying with all relevant environmental legislation, regulations, guidelines, policies and operating approvals.
- Developing Environmental Management Plans, which include best practices and protective measures. These measures are implemented prior to and during construction.
- Conducting on-site inspections during construction to ensure workers are adhering to the Environmental Management Plan and any approval and permit conditions.
- Conducting site visits once the project is complete to ensure any affected areas are restored.
- Maintaining and continually improving upon our Environmental Management System, which is based on the International Standard ISO 14001.
